

Deck Clock

Introducing our 2.4GHz wireless multi-function deck clock, featuring a ruggedized polyethylene enclosure.

Deck Clock (DC-1500)

The Colorado Deck Clock is an excellent deck side display solution, cleverly designed to prevent tipping. The deck clock features a ruggedized polyethylene enclosure that is water and sun resistant and completely corrosion free. The built in handle allows for easy carrying from point to point.

Multi-functional

The Deck Clock can be used as a game/shot clock for water polo, or set to pace in time of day.

Bright LED Digits

Variable intensity settings allow comfortable visibility in a variety of environments and times of day or night. Time of day or game time is displayed at the top, with 5" digits displaying hours and minutes. The large 10" digits show seconds for pacing or shot time.

Wireless

Wirelessly receives game/shot data from CTS tabletop or handheld wireless controllers. Can also receive wired data from the System 6 Timing Console.

Pacing

Pace in time of day (hours, minutes and seconds) without any controller. Multiple clocks will automatically synchronize in pace mode.

Integrated Horn:

The clock has an integrated weatherproof horn that produces both game and shot tones. This eliminates the need for separate game horn units.
